

# CMIP: A status update and future plans

Paul J. Durack, Karl E. Taylor, Sasha K. Ames,  
Chris F. Mauzey and Jeff Painter

DOE RGMA PI Meeting 2020

Thursday 15th October

Work completed by the PCMDI project is funded by the U.S. Department of Energy, Office of Science, Office of Biological and Environmental Research, Regional and Global Climate Modeling and Analysis Program

LLNL-PRES-815639

This work was performed under the auspices of the U.S. Department of Energy by Lawrence Livermore National Laboratory under contract DE-AC52-07NA27344. Lawrence Livermore National Security, LLC

# Why does DOE support CMIP?

- Promote increased scientific scrutiny of models used to inform climate change mitigation and adaptation policies
- Provide multi-model context for interpreting results
  - Lack of consensus across ensemble results calls for explanation, which leads to
    - Deeper understanding of results
    - Reduction in climate projection uncertainty
  - E3SM development efforts can be assessed
    - Development can be focused/prioritized, based on comparisons with CMIP ensemble
    - Provides international network for active collaboration
- Serve as a resource for DOE scientists, facilitating and expediting

# PCMDI: CMIP leadership activities

- As WGCM CMIP Panel members, we
  - Structure and evolve CMIP design to maximize scientific impact relative to the effort/cost
  - Lead synergistic activities that enhance CMIP value, for example:
    - input4MIPs: development, documentation, and comparison of forcing datasets (Paul Durack)
    - obs4MIPs: coordination of effort to host and serve observational datasets conforming to CMIP data standards (Peter Gleckler)
- By chairing the WGCM Infrastructure Panel (WIP), we
  - Ensure coordination of international projects developing CMIP infrastructure
  - Develop data standards that facilitate use of MIP results (models and obs)
- Our CMIP leadership

input4MIPs  
input datasets for Model Intercomparison Projects

obs4MIPs  
Observations for Model Intercomparison Project

PCMDI  
Earth System Model  
Evaluation Project

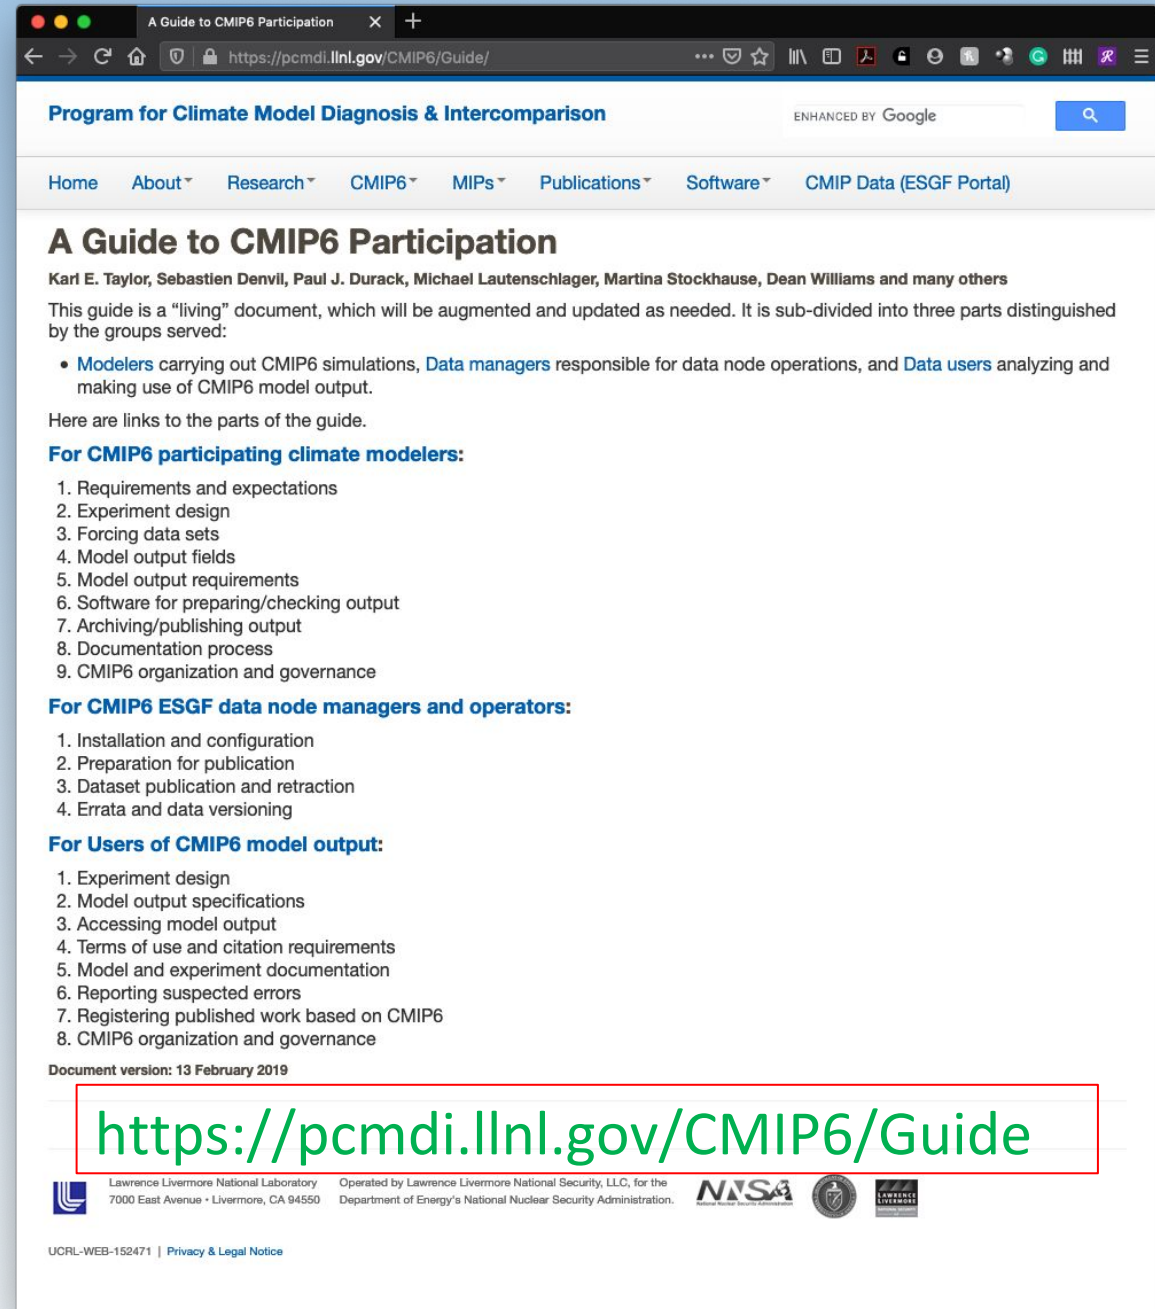

• Harnesses more than two decades of CMIP leadership experience

• Synergistically relies on the DOE ESGF project, which develops the software at the

core of the CMIP data archive storage and delivery

# CMIP6 Guide

- CMIP6 user guide – starting point for engagement
- Focused information for
  - Climate modelers (data providers)
  - ESGF node managers (data distributors)
  - Users (data analysts)
- Provides information and links to other CMIP6 supporting material

The screenshot shows a web browser window displaying the 'A Guide to CMIP6 Participation' page. The browser's address bar shows the URL <https://pcmdi.llnl.gov/CMIP6/Guide/>. The page title is 'Program for Climate Model Diagnosis & Intercomparison' with a search bar and 'ENHANCED BY Google'. The navigation menu includes 'Home', 'About', 'Research', 'CMIP6', 'MIPs', 'Publications', 'Software', and 'CMIP Data (ESGF Portal)'. The main heading is 'A Guide to CMIP6 Participation' by Karl E. Taylor, Sebastien Denvil, Paul J. Durack, Michael Lautenschlager, Martina Stockhause, Dean Williams and many others. The text describes the guide as a 'living' document and lists three parts: Modelers, Data managers, and Data users. It provides numbered lists of topics for each group. A red box highlights the URL <https://pcmdi.llnl.gov/CMIP6/Guide>. The footer includes logos for Lawrence Livermore National Laboratory, NISA, and UCRL-WEB-152471 | Privacy & Legal Notice.

# CMIP6 summary statistics

- 51 institutions/consortia (CMIP5: 31); 136 models (CMIP5: 59 models); 316 experiments, 104 tier 1 (CMIP5: 33, 14 tier 1)
- ~10 PB published to-date; 20–50 PB output expected (CMIP5: ~2 PB)
- PCMDI leads CMIP6 delivery (collaborates with partner institutions, see refs)

**CMIP6\_CVs** [https://github.com/WCRP-CMIP/CMIP6\\_CV](https://github.com/WCRP-CMIP/CMIP6_CV)

Core Controlled Vocabularies (CVs) for use in CMIP6

## Registering Institutions, Models, or requesting changes to CVs:

To register your institution or model or to request changes to a CV, please submit an issue/ticket following the instructions on the [CMIP6\\_CVs issue page](#).

Some support for CMIP participating modeling groups is available: [pcmdi-cmip@lnl.gov](mailto:pcmdi-cmip@lnl.gov)

To view the current `experiment_id` entries point your browser to [CMIP6\\_experiment\\_id.html](#)

To view the current `institution_id` entries point your browser to [CMIP6\\_institution\\_id.html](#)

To view the current `source_id` entries point your browser to [CMIP6\\_source\\_id.html](#)

The CVs build on logic that is described in the [CMIP6 Global Attributes, DRS, Filenames, Directory Structure, and CV's document](#)

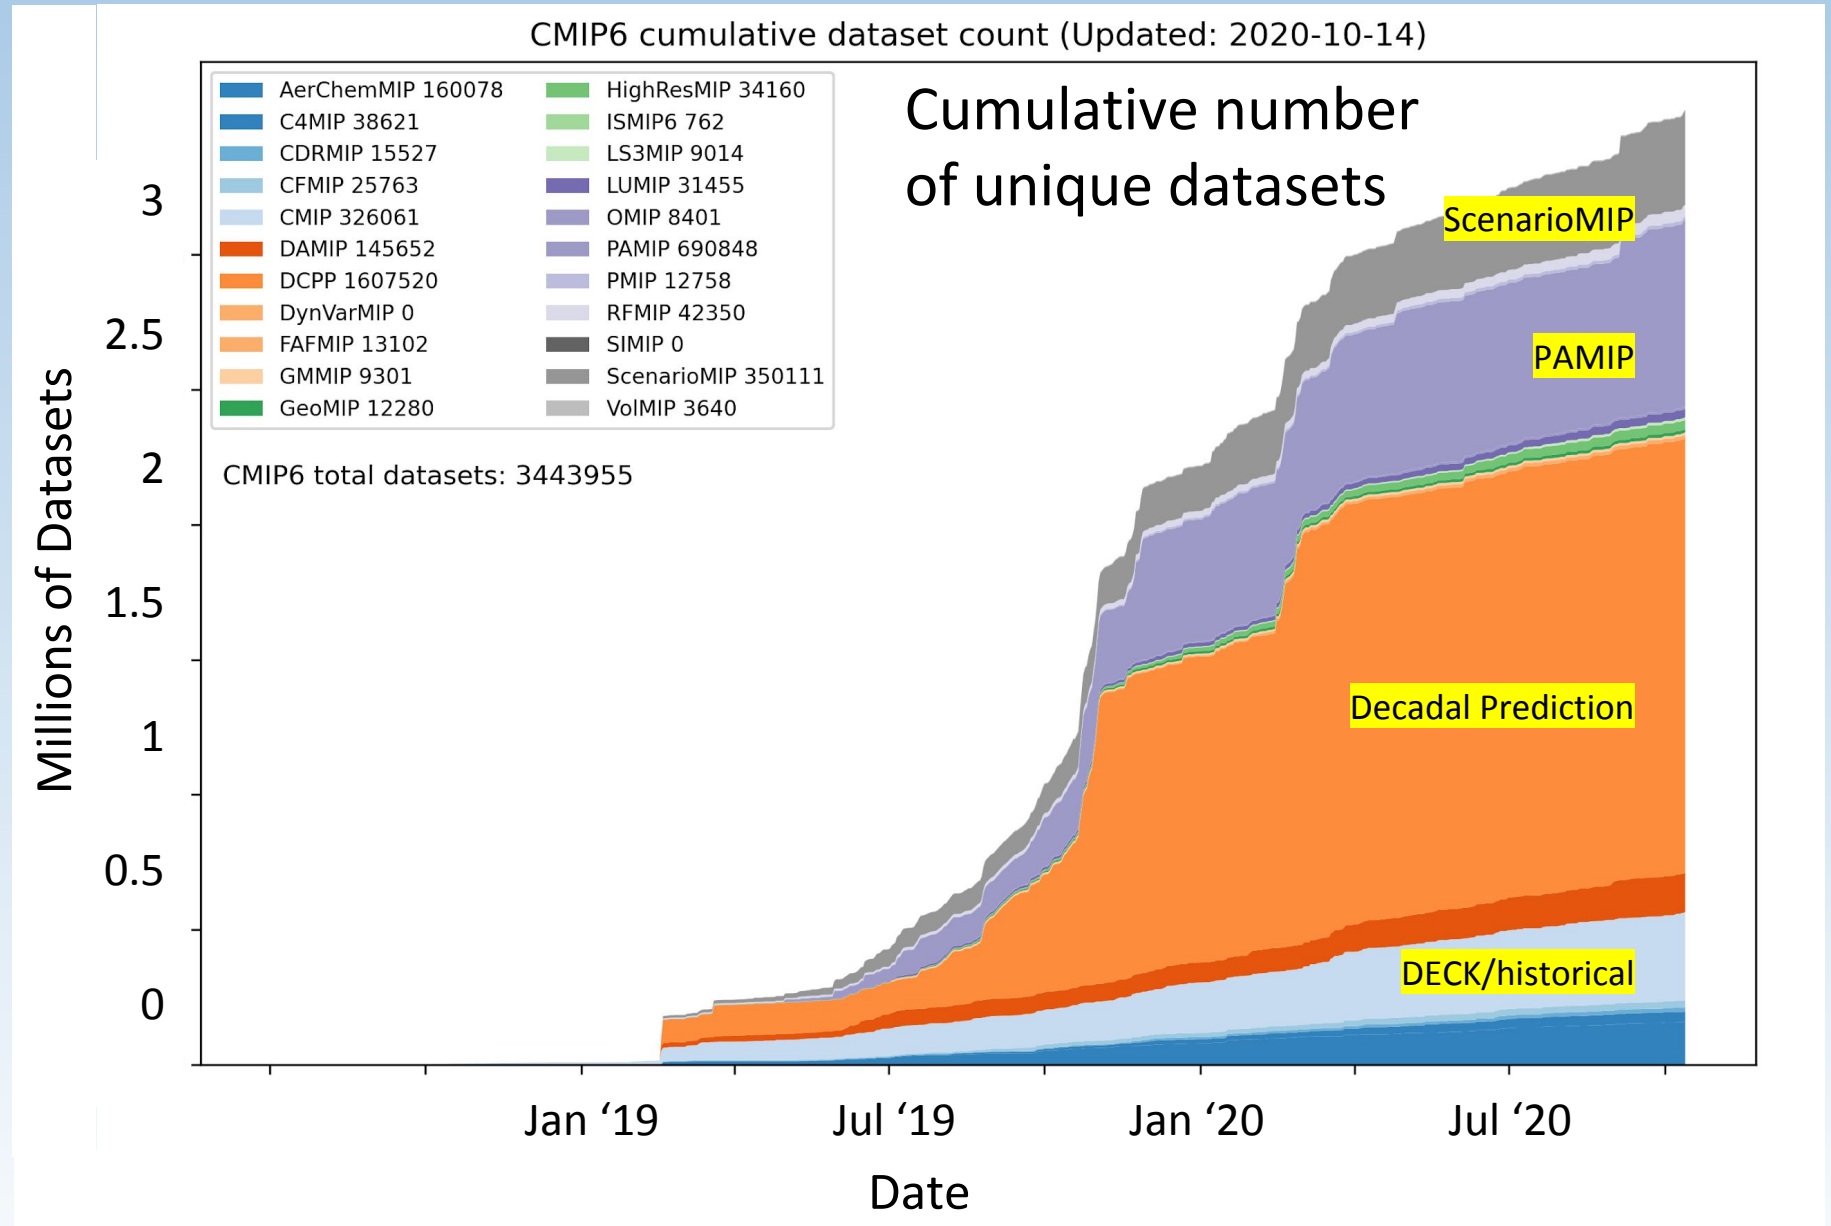

Registered:

- experiments
- institutions
- models

# CMIP6 data archive growth

CMIP6: >9 PB

- PCMDI has replicated ~85% of the datasets
- Other data nodes have also replicated large fractions

# CMIP6 data availability

Complete CMIP6

More than 28 days | More than 7 days | Less than 7 days

Click on an activity name at the top of the tables to go to a page for that activity's data holdings.

Number of 'datasets' [variables x (# of simulations)] from each model in support of each CMIP6 activity.

model	# of activities	AerChemMIP	C4MIP	CDRMIP	CFMIP	CMIP	DAMIP	DCPP	FAFMIP	GMMIP	GeoMIP	HighResMIP	ISMIP6	LS3MIP	LUMIP	OMIP	PAMIP	PMIP	RFMIP	ScenarioMIP	VolMIP

# CMIP look back and ahead

- The MIPs have been steadily growing over the last 29 years

MIP era	Active Years	# Experiments	# Models	Data volume
AMIP1	1991	1	27 (atmosphere-only)	1 GB
AMIP2	1995	1	33 (atmosphere-only)	500 GB
CMIP1	1995-1997	1	17 (Coupled ocean-atmos)	1 GB
CMIP2	2000-2005	2	17 (Coupled ocean-atmos)	500 GB
CMIP3	2007-2010	11	24 (Coupled ocean-atmos)	50 TB
CMIP5	2011-2014	39	59 (Coupled, ESMs)	2 PB
CMIP6	2018-2022	316 (24 sub-MIPs)	136 (Coupled, ESMs, plus radiation codes)	>20 PB
CMIP7?	2025-2029?	-	-	-

# CMIP7 planning is beginning

- Where can we simplify the structure to enable nimble responses to the creation of new MIPs to address new science questions?
  - Example: COVID-19 has inspired a possible “CovidMIP” (2020-2021)
    - to compare modeled and observed climate responses to changes in anthropogenic aerosols
    - ~10 modeling groups involved (including E3SM)
  - Example: Forcing datasets will continue to evolve
    - Can we continue to leverage the input4MIPs leadership to ensure datasets proposed for future work have been carefully vetted?
    - Volcanic forcing is a known issue for CMIP6 (Rieger et al., 2020 GMD)
- The challenge will be to provide flexibility while maintaining standards and procedures, which modeling groups and analysts now depend upon and which underlie model data delivery

# Input from CMIP users is invited

- What new infrastructure capabilities/tools should be developed to support CMIP-based research. For example
  - Regridding tools for easy comparison across models on different grids?
  - Alternative paths to CMIP output and documentation?
  - Methods by which data provenance can be easily recorded for journal articles?
  - Your ideas are needed!
- CMIP Panel survey will obtain feedback (within ~6 months)
  - Please share your opinions, suggestions for improving CMIP to serve the science
- Additional resources are being secured to aid CMIP-based research
  - CMIP international project office should be in place in 2021
